

# Sugar Glider Joey Development 2-4 Weeks OOP

This joey is 2 weeks OOP. Fur is slicked to the body, but smooth. Eyes have just opened. Tail is thin and not fluffy. Weight is 16-25 grams. Unable to regulate body temp.

3 Weeks OOP - Fur is starting to fill out and "fluff". Tail is slightly larger, but not puffy yet. Belly area may not be furred yet. Ears are still close to head. Weight is 25-40 grams

4 weeks OOP - Tail starts to look more full. Ears now begin to stand up. Just starting to hop. Not eating solidfoods. Unable to regulate body temp. Weight: 23-33 gm

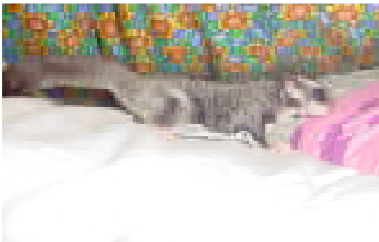

## 5-8 weeks OOP

5 Weeks OOP Tail more fluffy and full.  
May begin to try solid foods (baby food/  
fruit) Still unable to regulate body temp.  
Independently.  
Weight: 30-40 grams

6 Weeks OOP. Tail and body fur full and  
puffy. Begins to regulate body temp.  
independently. May move out of  
incubator and into cage.  
Weight 35-45 grams

7 weeks OOP. Tail and body fully furred.  
Weight: 40-50 grams

8 weeks OOP. Independent glider.  
Weight: 50-60 grams.
